

Perforated Gypsum Board

Aplus Sound Board is a perforated gypsum board designed to reduce reverberation time (echo resulting from sound reflection). It's equipped with a fabric layer (acoustic tissue) to absorb sound. It's ideal for karaoke rooms, studios, home theaters, ballrooms, and various other spaces that produce loud sounds as it effectively muffles the sound without compromising artistic value.

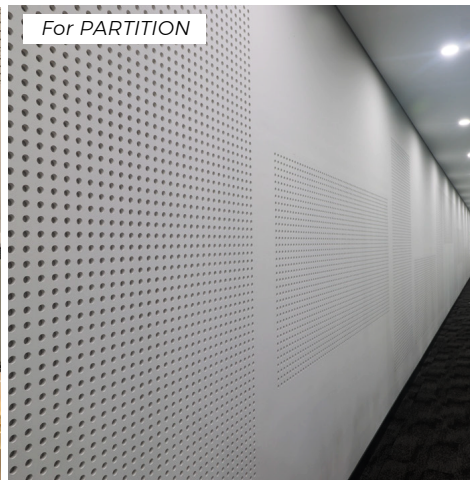

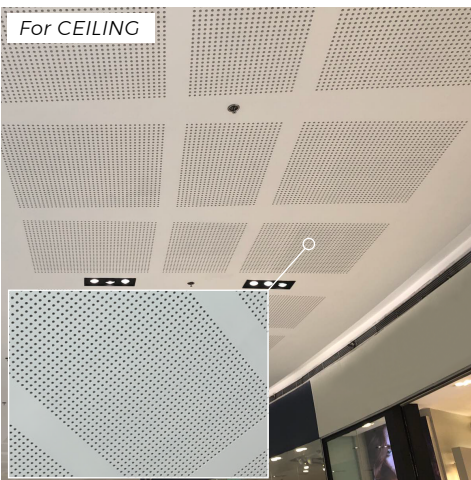

Type S15

TYPE	DIMENSIONS	MOTIVE
Type S15  <small>Ø Dimensions 15 mm</small>	Thickness : 12 mm Width : 1200 mm Length : 2400 mm	<input type="checkbox"/> M1  <input type="checkbox"/> M2 

ADVANTAGE

- High NRC value, up to 0.80 (using mineral wool with a density of 60kg/m³).
- Capable of being applied to curved ceilings and walls without compromising its sound absorption capability.

Installation Recommendations

- Cinema
- Hotel
- Apartment
- Home theater
- Karaoke rooms
- Music Studio
- Cafe and restaurant
- Meeting room
